Profile](#)

Senior Software Engineer with over 8 years of experience delivering full-stack products across AI, voice technology, and enterprise systems. A product-minded engineer who takes ownership from requirements to deployment — leading cross-functional teams, shaping technical direction, and consistently delivering on time even under real-world constraints. Experienced in agentic AI workflows and AI-assisted development, with a disciplined approach that keeps human judgement at the centre of every decision. Seeking to bring this product ownership mindset and engineering depth to organisations building at scale.

SKILLS

Engineering

React.js · TypeScript · Node.js · Express.js · FastAPI · Python · Redis · WebSocket · SQL

AI & Agentic Systems

Agentic AI Design Patterns · AI Workflow Integration · LLM Integration · Voice AI (STT/TTS) · AI-Assisted Development

Cloud & DevOps

AWS · Azure · Docker · Docker Compose · Nginx · GitLab CI · Multi-cloud Deployment

Architecture & Design

System Design · Scalable Architecture · Database Schema Design · API Design · UI/UX Design · Software Design Patterns

Leadership & Product

Product Ownership · Project Management · Technical Proposal Writing · Cross-functional Collaboration · Team Mentoring · Stakeholder Management · Code Review

Data Structures & Algorithms

LANGUAGES

English, Vietnamese

EXPERIENCE

KNOVEL ENGINEERING, Singapore — SENIOR SOFTWARE ENGINEER

JUN 2024 – PRESENT

- Took full ownership of a real-time AI-powered multilingual transcription and translation platform for live training events — working directly with the client to gather requirements, and driving all decisions across cloud architecture, UI/UX, and full-stack development. Delivered a contract-winning POC in 3 days. The platform supports 4 languages today, architected to scale to more with zero additional development effort.

- Designed a cost-efficient, stateless backend pipeline (FastAPI, Redis, WebSocket) integrating speech recognition, translation, and voice synthesis AI services — built for scalability and long-term maintainability.
- Led a cross-functional team of 5 (3 developers, 2 QA) to deliver a full internal CRM on Azure on time, despite an extended paternity leave — through strong upfront planning and team enablement.
- Owned frontend development of an internal operations platform for Harrianns (invoice management and order tracking) and authored technical proposals for both public and private sector tenders.
- Embedded agentic AI workflows into the team's development process, cutting prototyping timelines by up to 50% — while maintaining a human-led approach: personally owning requirements, task breakdown, and output review at every stage.
- Managed multi-cloud deployments across Azure and AWS, ensuring reliable delivery across all products.

HANDSHAKES BY DC FRONTIERS , Singapore — SENIOR SOFTWARE ENGINEER

FEB 2022 – JUN 2024 (2 YEARS 4 MONTHS)

- Grew and mentored a team of junior engineers — both internal and external — fostering a high-performing team culture that directly improved product delivery velocity and engineering quality across the organisation.
- Partnered with Product and Design to shape product direction, translate user needs into technical requirements, and surface new product opportunities during roadmap planning.
- Championed engineering best practices including structured code reviews and design standards, resulting in measurably improved code quality, fewer production incidents, and consistently faster release cycles.
- Introduced feature-flag-driven development, enabling three product phases to be developed and shipped simultaneously within a single codebase — reducing time-to-market without compromising stability or quality.
- Continuously evaluated emerging technologies, introducing those that meaningfully accelerated the team's ability to deliver product improvements and respond to user needs faster.

HANDSHAKES BY DC FRONTIERS , Singapore — SOFTWARE ENGINEER 2

SEP 2019 – FEB 2022

- Spearheaded the design and development of the scoutAsia platform end-to-end — from conceptualization to deployment — using React, TypeScript, Express, and Redux, delivering a robust and scalable architecture that met client needs efficiently.
- Drove the strategic direction of frontend technologies, introducing best practices and coding standards that elevated code quality, maintainability, and overall product performance.
- Upgraded the Webpack build system from v4 to v5, delivering a 20% improvement in build time and reducing bundle size by 15% — resulting in faster load speeds and a measurably better user experience.
- Initiated and led weekly developer discussions and tech-sharing sessions, fostering a culture of knowledge exchange and cross-team collaboration that elevated overall team productivity.

FUJI XEROX , Singapore — SOFTWARE ENGINEER

APR 2017 – AUG 2019

- Designed and implemented performance optimisations for the Address Book feature, improving loading

speed, memory efficiency, and overall user experience.

- Developed and delivered features for a new printer system, contributing to product quality through unit and integration testing with MochaJS and Selenium.
- Researched and built features for Proof of Concept projects spanning Internet-of-Things and AI image recognition, demonstrating early capability in emerging technology domains.

EDUCATION

National University of Singapore, Singapore — *Bachelor of Computing in Computer science*

2013 - 2017

Republic Polytechnic, Singapore— *Diploma in Information Technology with merit*

2010 - 2013
